DETAILED ACTION

Claim Objections

1. Claims 4-6 and 10-16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend upon another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.
2. Claims 1-16 are further objected to because of the following informalities: The use of the phrase "in accordance with" is improper. Examiner suggests the phrase "according to" as a substitute. Appropriate correction is required.

Specification

3. The disclosure is objected to because of the following informalities: The descriptions for reference numbers "112" and "113" are missing. Appropriate correction is required.

Regarding claim 1, Hanley teaches a golf score system for use on a golf course (Abstract), comprising a plurality of score recording terminals for handling golf score data (50), each terminal being located in connection with a particular hole on the golf course and arranged for recording data associated with the hole (col. 6, lines 20-25; col. 7, lines 31-36), each score recording terminal comprising an input device (34) for entry of input data from a user, the input data comprising the number of strokes that the user has used in connection with the particular

hole on the golf course (col. 7, lines 31-51); a first communication device (72) for communication with a personal information carrier (10), a memory (14) for storage of data (16) and an executable program code (col. 3, lines 37-49), and a processing device (12) arranged to receive score data from the personal information carrier (col. 7, lines 6-11); to receive input data from the input device (col. 7, lines 6-11); to deliver new score data to the personal information carrier (col. 7, lines 6-11), characterized in that the processing device is further arranged to receive form of play data which indicates current form of play from the personal information carrier (col. 7, lines 31-51), and to calculate the new score data on the basis of the received score data and the received input data, the step of calculating new score data including calculating a score on the basis of the received input data and the form of play data (col. 7, lines 31-51).

Regarding claim 2, Hanley teaches a score recording terminal further comprising a second communication device (306) for communication with a central computer (304) wherein the processing device is further adapted to deliver the new score data to the central computer via the second communication device (col. 6, lines 8-15).

Regarding claim 3, Hanley teaches a score recording terminal further comprising a display device (66), and wherein the processing device in the score recording terminal is further adapted to display output data comprising the score data on the display device (Fig. 5).

Regarding claim 7, Hanley teaches a computer-implemented method for handling golf score data (Abstract), for execution by a score recording terminal (50), wherein the score recording terminal is adapted to communicate with a personal information carrier (10), and wherein the method comprises receiving score data from the personal information carrier (col. 7, lines 6-11), receiving input data from a user via an input device (34), calculating new score data on the basis of the received score data and the received input data (col. 7, lines 31-51), and sending the new score data to the personal information carrier (Fig. 5).

Art Unit: 4115

Regarding claim 8, Hanley teaches receiving form of play data which indicates current form of play from the personal information carrier and calculating a point score on the basis of the received input data and the form of play data (col. 7, lines 31-51).

Regarding claim 9, Hanley teaches delivering the new score data to the central computer via a second communication device (col. 6, lines 8-15).
